

## HF600 and 700 Rotary Cultivators

Above: A HF600 rotary cultivator in operation  
Left: Both HF600 and HF700 models together

### PERFORMANCE

The Kersten range of **all-hydraulic rotary cultivators** is probably one of the most robust cultivating machines available.

With engines from 13hp to 16hp and widths of 60cm or 70cm, the heavy duty rotor has 12 rear mounted blades with a total diameter of 400 mm giving a very generous digging depth together with a fine tilth if required.

### RELIABILITY

Hand built in our German factory and finished in powder coated steel the HR range is designed to last for years.

They feature hydraulic drive allowing an infinitely variable speed to suit all types of soil conditions.

The hydraulic drive means smooth operation.

### EASE OF USE

The depth may be adjusted using the easily adjustable rear leg. The handles adjust to the operators height and has one lever control of both the rotor and wheels.
